

# VERSA**FRAC**TILITY

New Fontaine Twist Lock Dropdecks haul frac sand containers, pipe, materials or equipment with ease...

Another  
**FONTAINE FIRST™**  
INNOVATION

- The most versatile dropdeck on the market
- Configured to haul frac sand bins, intermodal containers and typical dropdeck loads
- Steel reinforced mainbeams withstand the rigors of the oil field industry
- Twist locks positioned behind the siderail to help protect the mechanism from side impacts
- Fontaine TX twist lock frac sand haulers are available in two models:  
Infinity TX aluminum/steel combo frac sand hauler  
Velocity TX all steel frac sand hauler

**Fontaine twist locks** are placed behind the siderail to help protect the mechanism. This stronger design also gives you full use of the siderail load securement system so you can handle conventional loads with ease.

**Competitive twist locks** are cut into the side rail and are exposed to side impact damage from fork lifts. This weaker design interrupts the stake pockets/load securement system and annoys drivers.
